**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Wellhead cut & cap operations were completed at the Victor USX W 23-6 wellhead on October 10, 2024. Groundwater was not encountered in the cut and cap excavation. Visual inspection and field screening of soil around the wellhead and associated pumping equipment were conducted following cut and cap operations. A soil sample [B01(23-6)@6'] was submitted for analysis of full list Table 915-1 to determine if a release occurred. The flowline associated with the wellhead was removed on October 10 and October 11, 2024. Samples were collected from the locations where the flowline risers were disconnected from the wellhead [WH01-RISER(23-6)@3'] and from the separator [SEP01-RISER(21-23,23-4,5,6)@3']. Samples were submitted for full list Table 915-1 constituents to determine if a release occurred. Laboratory analytical results indicated that benzo(a)anthracene and lead impacts exceeding the ECMC Table 915-1 allowable levels or background were present at the wellhead riser. As such, a Form 19 Initial/Supplemental Spill/Release Report (Document No. 403957696) was submitted on October 17, 2024 and the ECMC issued Spill/Release Point ID 488348. The wellhead excavation and flowline potholes are depicted on Figures 1 and 2. The PID readings and soil sample results are summarized in Tables 1 and 2. The Form 44 is attached.

Excavation activities are ongoing, and details will be provided in a subsequent Form 27 supplemental report.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

On October 10 and October 11, 2024, samples were collected from the base of the cut and cap excavation [B01(23-6)@6'] and the locations where the flowline risers were disconnected from the wellhead [WH01-RISER(23-5)@3'] and from the separator [SEP01-RISER(21-23,23-4,5,6)@3']. The samples were submitted for laboratory analysis of full list Table 915-1 constituents using ECMC-approved methods. Analytical results indicated that benzo (a)anthracene and lead impacts exceeding the ECMC Table 915-1 allowable levels were present at the wellhead riser. The laboratory reports are attached.

**Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Groundwater was not encountered during wellhead cut and cap or flowline removal activities.

**Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

On October 10, 2024, visual inspection and field screening of soil were conducted at four sidewall locations within each cut and cap excavation area and four locations at the ground surface adjacent to the cut and cap excavation area. Based on the inspection and screening results, hydrocarbon-impacted soil was not observed at the screening locations, and no soil samples were submitted for laboratory analysis from these areas, in accordance with the ECMC Operator Guidance. A photographic log is attached.

On October 23, 2024, a soil gas survey was conducted at three soil vapor points installed adjacent to the former wellhead locations following cut and cap operations. Two additional SVPs were blocked or destroyed and could not be screened. GEM 5000 field readings were all non-detect for methane at all remaining soil vapor points. The soil vapor point locations are illustrated on Figure 1. The soil vapor field form is included as an attachment.

## OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

Twelve background soil samples (Native-BG01@3' through Native-BG06@3' and Native-BG01@6' through Native-BG06@6') were collected from the native material outside of the wellhead cut and cap excavation area. Background soil samples were submitted for laboratory analysis of pH, electrical conductivity (EC), sodium adsorption ratio (SAR), boron and Table 915-1 metals using ECMC-approved methods. Analytical results indicate that pH, arsenic, and barium are naturally high in the native soil. The background soil sample analytical results are summarized in Table 2. The background soil sample locations are illustrated on Figure 1.

### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Impacted soil from the wellhead cut and cap excavation will be removed and transported to a licensed disposal facility. Final disposal information will be provided upon completion of assessment activities. Disposal records are kept on file and available upon request. The excavation areas will be backfilled and contoured to match pre-existing conditions.

Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Laboratory data indicate that benzo(a)anthracene and lead impacts above the ECMC Table 915-1 allowable levels are present at the former wellhead riser. Groundwater was not encountered during wellhead cut and cap or flowline removal activities. Excavation activities are ongoing and will be summarized in a subsequent Form 27 Supplemental report.
