**ECMC Comments**

Comment	User	Date
Well is PA (HSR William Mayer 5-22); ECMC form 42 notice of start of plugging operations doc #403638420 received on 12/28/2023. Facility/ battery services additional wells. The off location flowline servicing 5-22 is AIP; no flowline riser at PA well. Flowline at HHS equipment is cut/ capped below grade and disconnected/ isolated (open excavation). Other flowline risers at HHS are OOSLAT (lock/ tags). No Oxy or contract personnel were on location at the time of field inspection.	maclarej	03/14/2025
As outlined on ECMC form 19 spill report Doc #404119900 received on 03/07/2025: While conducting flowline removal activities at the William Mayer 5-22A flowline, historically impacted soil was discovered beneath a directional change of the former flowline. The volume of the release is unknown. The flowline has been removed and will not be replaced.	maclarej	03/14/2025
