Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	GROUNDWATER	Refer to Tables and Figures	Lab Analysis
Yes	SOILS	Refer to Tables and Figures	Field Screening and Lab Analysis

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the Five Rivers USX K09-21D wellhead cut and cap and flowline removal. The wellhead was cut and capped per ECMC rules on 01/08/24. A grab soil sample was collected at the base of the excavation (WH-FS-01@6') and soil samples were field screened at the N-E-S-W sidewalls of the wellhead excavation (WH-SS-01@5' - WH-SS-04@5'. Additional screening samples were collected from from the surficial soils outside the wellhead excavation in each cardinal direction (WH-N@0.5' - WH-W@0.5').

The flowline was fully removed (approximately 1563' in length) on 03/21/24 per Form 44 # 403770365. Confirmation soil samples were collected from beneath the flowline riser at the wellhead (FL01-A@3'), as well as any points of material change and/or hammer unions, directional changes, as well as at the bell holes on either side of a waterway as applicable (FL01-D, G - J, and L - N). Field screening samples were also collected along the flowline as needed (FL01-F & FL01K). The Five Rivers USX K09-21D flowline was in a common trench with the Five Rivers K09-07D, K09-18D, & K09-19 flowlines. The flowline riser at the separator was sampled during the decommissioning of the Five Rivers K09-67-1HN Pad location (REM # 30784) and is being reported under that remediation number.

Concentrations of 1,3,5-trimethylbenzene (TMB), naphthalene, benzo(a)anthracene, benzo(a)pyrene, dibenzo(a,h)anthracene, fluorine, 1-methylnaphthalene (M), and 2-M exceeding ECMC Table 915-1 regulatory standards were observed at sample locations FL01-A, D, H - J, and L - N. As proposed under ECMC Form 27 Document Number 403772452, which was submitted for the Five Rivers K09-07D (REM# 29936), the sources identified at FL01-J, I, H, D, and C will be removed through a remedial excavation managed under REM# 29936. Additionally, the soil analytical report for sample locations FL01-D, E, F, and H - K were submitted under Form 27 # 403772452.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Soil samples were collected as described in the Initial Action Summary section of this report. Sampling deviated from the sampling plan in the Initial Form 27 because the line was planned to be partially abandoned in place. However, the entire flowline was removed during decommissioning activities. Samples will be analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, EC, SAR, pH, boron, and metals. All samples collected will be analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was encountered during the excavation activities following the initial decommissioning. A grab groundwater was collected where encountered (FL01-L@3', FL01-N@4', and FL01-M@3') and analyzed for all organic and inorganic compounds per ECMC Table 915-1; this sample analysis includes, but is not limited to BTEX, naphthalene, 1,2,4-trimethylbenzene (TMB), and 1,3,5-TMB by EPA Method 8260, chloride and sulfate anions by EPA Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the wellhead and flowline areas occurred during abandonment activities. Field personnel screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. A detailed summary of the wellhead decommissioning activities, including an ECMC Wellhead Closure Checklist, site photos, figures, and laboratory analytical results, was submitted as an attachment to Form 27 # 403785499. A detailed summary of the flowline decommissioning activities, including an ECMC Flowline Closure Checklist, site photos, figures, and laboratory analytical results, was also submitted as an attachment to Form 27 # 403785499.

The soil analytical report for sample locations FL01-D, E, F, and H - K were submitted under Form 27 # 403772452.

SITE INVESTIGATION REPORT

SAMPLE SUMMARY

Soil	NA / ND
Number of soil samples collected <u>36</u>	-- Highest concentration of TPH (mg/kg) <u>1.3</u>
Number of soil samples exceeding 915-1 <u>35</u>	-- Highest concentration of SAR <u>2.02</u>
Was the areal and vertical extent of soil contamination delineated? <u>No</u>	BTEX > 915-1 <u>No</u>
Approximate areal extent (square feet) <u>100</u>	Vertical Extent > 915-1 (in feet) <u>9</u>
Groundwater	
Number of groundwater samples collected <u>3</u>	-- Highest concentration of Benzene (µg/l) <u>3.6</u>
Was extent of groundwater contaminated delineated? <u>No</u>	-- Highest concentration of Toluene (µg/l) <u>3</u>
Depth to groundwater (below ground surface, in feet) <u>3</u>	-- Highest concentration of Ethylbenzene (µg/l) <u>17</u>

Number of groundwater monitoring wells installed 0
Number of groundwater samples exceeding 915-1 1

-- Highest concentration of Xylene (µg/l) 130
NA Highest concentration of Methane (mg/l) _____

Surface Water

0 Number of surface water samples collected
 Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

A total of 8 background samples were collected from four discrete locations and analyzed for arsenic, barium, lead, and pH. Background samples were collected from between 2' and 6' below ground surface. The lithology between the site samples and background locations were observed to be generally poorly to well graded sands. The maximum background concentration of pH was observed to be 9.18, and the maximum background concentration of arsenic, barium, and lead with a 1.25 multiplier applied were calculated to be 2.73 mg/kg, 170 mg/kg, and 14.9 mg/kg, respectively. All pH concentrations observed during the initial decommissioning and subsequent excavations were below background levels.

Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) _____ Volume of liquid waste (barrels) _____

Is further site investigation required?

A supplemental site investigation (SSI) was completed at the FL01-M location in December 2024. Excavation activities occurred December 2024 through January 2025. Upon receipt of secure laboratory analytical results, the results of each will be summarized in a subsequent Form 27.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The sources identified at FL01-A, FL01-L, FL01-M, and FL01-N are in the process of removal through a remedial excavation, as described in the Remediation Summary section below. Remedial excavation confirmatory samples are being analyzed for the full extent of ECMC Table 915-1. A detailed discussion regarding the management of the releases identified at FL01-J (Spill ID 486555), FL01-I (Spill ID 486554), FL01-H (Spill ID 486547), FL01-D (Spill ID 486553), and FL01-C (Spill ID 486552) was submitted to the ECMC under Form 27 Document Nos. 403785499 and 404040956.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Remedial excavation activities were conducted in July and August 2024, to address observed exceedances at FL01-A, FL01-L, FL01-M, and FL01-N. After removal of 1,470 cubic yards of impacted soils and 11,930 BBLS of groundwater infiltration into the excavations, excavation activities were paused due to the large influx of groundwater into the excavations. Remedial excavations are currently underway to address exceedances observed at sample locations FS02-FL01-A@5', SS01-FL01-N@3', and the area surrounding FL01-M. A supplemental site investigation (SSI) has been completed in the area of FL01-M in an effort to delineate the exceedances in that area. The SSI and excavations will be summarized on a subsequent Form 27.

Due to the presence of impacted groundwater identified in the FL01-M excavation, additional remedial excavation activities will not be continued at this time, and six groundwater monitoring wells will be installed to delineate the extent of the impacts. Soil samples will be collected from the soil borings and analyzed for the full list of ECMC Table 915-1 contaminants of concern.

Soil Remediation Summary

In Situ

Ex Situ

_____ Bioremediation (or enhanced bioremediation)

Yes Excavate and offsite disposal

_____ Chemical oxidation

_____ If Yes: Estimated Volume (Cubic Yards) 1470

_____ Air sparge / Soil vapor extraction

Name of Licensed Disposal Facility or ECMC Facility ID # _____

_____ Natural Attenuation

No Excavate and onsite remediation

_____ Other _____

_____ Land Treatment

_____ Bioremediation (or enhanced bioremediation)

_____ Chemical oxidation

_____ Other _____

Groundwater Remediation Summary

 No Bioremediation (or enhanced bioremediation)

 No Chemical oxidation

 No Air sparge / Soil vapor extraction

 No Natural Attenuation

 Yes Other Pumped and transported 11,930
 BBLS to NGL C3 for disposal

GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

After the final extent of the excavations are completed, monitoring wells will be proposed within each excavation area where groundwater infiltration was observed along with proposed monitoring wells outside of the excavation areas. Proposed groundwater monitoring wells will be proposed on a subsequent Supplemental Form 27.

REMEDIATION PROGRESS UPDATE

PERIODIC REPORTING

Approved Reporting Schedule:

Quarterly Semi-Annually Annually Other

Request Alternative Reporting Schedule:

Semi-Annually Annually Other

Rule 913.e:

After initial approval of a Form 27, the Operator will provide quarterly update reports in a Supplemental Form 27 to document progress of site investigation and remediation, unless an alternative reporting schedule has been requested by the Operator and approved by the Director. The Director may request a more frequent reporting schedule based on site-specific conditions.

Report Type: Groundwater Monitoring Land Treatment Progress Report O&M Report
 Other 1Q2025 Timeline Update

Adequacy of Operator's General Liability Insurance and Financial Assurance

Describe the adequacy of the Operator's general liability insurance and Financial Assurance to fully address the anticipated costs of Remediation, including the estimated remaining cost for this project (below).
If this information has been provided on a Form 27 within the last 12 months, provide the Document Number of that form.

Noble intends to directly address the costs of remediation at the locations as part of our asset retirement obligation process and operations. Noble has general liability insurance (policy MWZZ 316714) and financial assurance in compliance with ECMC rules. Records are available on the ECMC's website. The cost for remediation is an estimate only, costs may change upwards or downward based on site-specific information. Noble makes no representation or guarantees as to the accuracy of the estimate.

Operator anticipates the remaining cost for this project to be: \$ 50000

WASTE DISPOSAL INFORMATION

Was E&P waste generated as part of this remediation? No

Describe beneficial use, if any, of E&P Waste derived from this remediation project:

Volume of E&P Waste (solid) in cubic yards 1470

E&P waste (solid) description Hydrocarbon impacted soils

ECMC Disposal Facility ID #, if applicable:

Non-ECMC Disposal Facility: Waste Management Ault

Volume of E&P Waste (liquid) in barrels 11930

E&P waste (liquid) description Groundwater in contact with impacted soils within the excavations

ECMC Disposal Facility ID #, if applicable:

Non-ECMC Disposal Facility: NGL C3

REMEDIATION COMPLETION REPORT

REMEDIATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? No

If YES:

Compliant with Rule 913.h.(1).

Compliant with Rule 913.h.(2).

Compliant with Rule 913.h.(3).

Do all soils meet Table 915-1 standards? _____

Does the previous reply indicate consideration of background concentrations? _____

Does Groundwater meet Table 915-1 standards? _____

Is additional groundwater monitoring to be conducted? _____

Operator shall comply with the ECMC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Reclamation will be in accordance with COGCC 1000 Series Rules.

Is the described reclamation complete? Yes _____

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

Interim Final

Did the Surface Owner provide the seed mix? _____

If YES, does the seed mix comply with local soil conservation district recommendations? _____

Did the local soil conservation district provide the seed mix? _____

SITE RECLAMATION DATES

Proposed date of commencement of Reclamation. 06/26/2026

Proposed date of completion of Reclamation. 02/09/2028

IMPLEMENTATION SCHEDULE

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

PRIOR DATES

Date of Surface Owner notification/consultation, if required. 06/06/2023

Actual Spill or Release date, or date of discovery. 05/09/2024

SITE INVESTIGATION DATES

Date of Initial Actions described in Site Investigation Plan (start date). 03/21/2024

Proposed site investigation commencement. 06/25/2025

Proposed completion of site investigation. 06/26/2025

REMEDIAL ACTION DATES

Proposed start date of Remediation. 12/26/2025

Proposed date of completion of Remediation. 12/26/2026

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

Change from approved implementation schedule per Rule 913.d.(2).

Basis for change in implementation schedule:

"Proposed completion of site investigation" date is being updated to reflect the completion of site investigation activities conducted in December 2024 and remedial excavation activities conducted in December 2024 through January 2025. Secured laboratory analytical reports are currently pending, and results will be submitted on a subsequent Form 27.

OPERATOR COMMENT

This Supplemental Form 27 is being submitted as a 1Q25 timeline update for Five Rivers USX K09-21D flowline site investigation activities conducted in December 2024 and excavation activities conducted in December 2024 through January 2025. Secured analytical lab reports are currently pending. Upon receipt of secured reports, analytical findings will be summarized and provided on a subsequent Form 27. Quarterly reporting will be conducted until closure criteria are achieved.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
