## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	GROUNDWATER	NA	laboratory analysis if encountered
UNDETERMINED	SOILS	NA	laboratory analysis

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to COGCC Rule 911 a site investigation will be conducted pertaining to the CHEWY B23-25 wellhead cut and cap and flowline removal. Approximately 275' of flowline will be removed if present. The wellhead was capped per ECMC rules per DOC 402397106.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab soil samples will be screened and collected at the base of the excavation or the area showing the highest degree of impact during field screening activities. Additionally, soil samples will be screened and collected at the N-E-S-W sides of the former wellhead. Additionally, soil samples will be screened and sampled along the flowline at any points of material change and/or hammer unions, directional changes, as well as at the bell holes on either side of a waterway. Lastly, background samples will be collected from soil of similar lithographic material to further compare ECMC Table 915-1 COCs. All soil samples will be analyzed by a certified laboratory for ECMC Table 915-1 COCs. All samples collected will be analyzed by a certified laboratory using approved ECMC laboratory analytical methods.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered during the site investigation a grab groundwater will be collected and analyzed for all organic compounds per ECMC Table 915-1.

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection of the flowline areas will occur during abandonment activities. Field personnel will field screen all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling is required. The ECMC Flowline Closure and Wellhead Closure Checklists will be utilized and filled out during the abandonment process. A photolog will be submitted on the Subsequent Form 27.
