**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

During reclamation of the Hayes Federal 31-8H5 location, historical impacts were discovered. The extent of the impacts was determined through an environmental assessment. Five initial grab soil samples were collected for Table 915-1 TPH and organics analysis during the initial assessment. These results were provided in Doc.#403780957. Ten additional soil samples were collected for Table 915-1 TPH, organics, and inorganics analysis during delineation activities. SB-05@0-2' was also analyzed for Table 915-1 metals for waste characterization. A background sample was collected for analysis of SAR, Arsenic, and Chromium (VI). In addition, two grab groundwater samples were collected from temporary monitoring wells for analysis of BTEX, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene. These results were provided in Doc.#403997666.

**OPERATOR COMMENT**

This supplemental form 27 represents a 2Q25 quarterly update for the confirmation soil sample results of the investigation activities associated with the Hayes Federal 31-8H5 release location. Confirmation soil samples were collected in areas where potential contamination was identified during site reclamation activities.

As described in Doc.#403780957, five initial grab soil samples were collected for Table 915-1 TPH and organics analysis during the initial assessment conducted on June 14, 2021. The initial investigation identified PAHs that exceeded the soil regulatory limits in sample SS-03 @ 0.5', and PAHs that exceeded the protection of groundwater regulatory limits at samples SS-02 @ 0.5' and SS-03 @ 0.5'. A secured analytical data report is attached and data summarized in the attached Eagle data package.

On June 30, 2021, ten additional soil samples were collected for delineation of Table 915-1 TPH, organics, and inorganics. This additional sampling revealed exceedances of SAR at soil borings SB-02 @ 0-2', SB-04 @ 0-2', SB-07 @ 0-2' and SB-10 @ 0-2' and PAHs that exceeded the protection of groundwater regulatory limits at samples SB-06 @ 0-2', SB-09 @ 0-2' and SB-10 @ 0-2'. In addition, two grab groundwater samples were collected from temporary monitoring wells for analysis of BTEX, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene. The sampling results indicated that there were no exceedances of these analytes.

Based upon these results, supplemental source mass removal (SSMR) via mechanical excavation to address the residual petroleum hydrocarbon and SAR soil and potential groundwater impacts identified at the Site. The Operator is in the process of scheduling SSMR activities.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
