Notes:

1 - Groundwater elevation was corrected for product thickness (when present) using the following calculation:

Groundwater elevation = (TOC Elevation - Measured Depth to Water) + (LNAPL Thickness in Well * LNAPL Relative Density)

LNAPL relative density was assumed to be approximately 0.75

2 - Changes in groundwater elevation calculated by subtracting the measurement collected during the previous monitoring event from the measurement collected during the most recent monitoring

LNAPL = Light non-aqueous phase liquid

amsl = Feet above mean sea level

TOC = Top of casing

NM = Not measured

NC = Not calculated
