Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Summit Midstream (Summit) was notified on 4/14/25 at 1815 that a landowner discovered indications of a potential natural gas pipeline leak on his property. A field operator then met with the landowner to determine the exact location and investigate the release. After determining that there was an active release on the DJ-S-Mark Brown 1 lateral, the pipeline was isolated, de-pressurized and is inactive pending further investigation. The root cause of this release is still under investigation. Corrective actions are being determined and will be updated as necessary in a Supplemental Form 19.

Summit Midstream (Summit) was notified on 4/14/25 at 1815 that a landowner discovered indications of a potential natural gas pipeline leak on his property. A field operator then met with the landowner to determine the exact location and investigate the release. After determining that there was an active release on the DJ-S-Mark Brown 1 lateral, the pipeline was isolated, de-pressurized and is inactive pending further investigation. The root cause of this release is still under investigation. Corrective actions are being determined and will be updated as necessary in a Supplemental Form 19.

There are no groundwater wells within a quarter mile of the release. Depth to groundwater is unknown at this time. If groundwater is encountered at this location, an additional notification will be made to ECMC. No High Priority Habitats or wetlands have been identified within a quarter mile of the release. The closest surface water is Darby Creek 1 mile to the east and North Sterling Reservoir located 4.5 miles to the southeast

No other potential receptors have been identified within a quarter mile of the location at this time.

See attached Figure 1 for site location.
