**General Comment:**

Inspection to witness MIT to verify well integrity and maintain use as observation/monitor well. 670 on tubing and 350 psi on casing on arrival. Well not pre-tested or stabilized in advance. Operator chose to blow down both tubing and casing in order to have a lower pressure test and still maintain + 300 psi differential. Test was run additional 10 minutes to fully stabilize.

Well report as SI on monthly Form 7. SI defined as readily able to produce to sales. No production equipment or sales line on location.

No 24-hour operator contact number or emergency services number on well sign. See signs and markers section for CA.

Mature dead noxious weeds from last growth cycle observed near center of location.

Facility ID: 215889

Type: WELL

API Number: 067-07494

Status: AC

Insp. Status: AC

Idle Well

Purpose: ☐ Shut In ☒ Temporarily Abandoned

Reminder:

Comment: Well used to monitor quarterly formation pressure

Upon arrival, tubing had 623 psig and casing 350 psig. Operator blew both down prior to test.

With pump truck casing was pressured up to 539 psig, 5 min 539, 10 min 536, 15 min 528, 20 min 526, 25 min 525. Test run additional 10 min to obtain full stabilization. No bradehead pressures observed.

Corrective Action:
