Re: Cement Verification Report
 Linnebur # 44-12
 Section 12-3S-65W
 Adams County, Colorado

Gentlemen:

The above referenced well was filled with 10# mud, 10 sacks were put at the bottom of the surface casing, and 10 sacks cement at the top of surface casing. The pipe was cut off 3' below the surface and placed a well cap on the surface pipe. A 200' plug was set across the Fox Hills formation from 1690-1490' to protect fresh waters.

To my knowledge no junk was left in the hole

Very truly yours,

Scotty A. Smith
 Operations Manager
