**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This oil and gas Location is in the Colorado ECMC Orphaned Well Program (OWP). This Form 27 Initial presents activities to be performed during decommissioning of Oil and Gas Facilities, specifically cut and cap sampling activities following emergency plugging and abandonment (PA) of the well. Field screening will be performed of the four sidewalls and base of the wellhead excavation to investigate for evidence of E&P Waste impacts. At a minimum, soil samples will be submitted to an accredited environmental laboratory for analysis of Table 915-1 parameters from the excavation sidewall soils that exhibit E&P Waste impact; or from the expected downgradient sidewall in the absence of E&P Waste impact; and from the base of the excavation. Soil samples will be collected and analyzed in accordance with Colorado ECMC 900 Series Rules.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab soil samples will be collected from areas most likely to exhibit E&P Waste impacts. Soil samples will be submitted for analysis of Table 915-1 parameters including organic compounds (TPH ranges C6-C36; BTEX; 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, Naphthalene, PAH) and inorganic compounds (metals, soil suitability for reclamation).

**Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Groundwater samples are not expected to be collected as part of this investigation. If encountered in sufficient quantity to enable sample collection, a grab groundwater sample or samples will be collected and submitted for analysis of organic compounds (BTEX; Naphthalene; 1,2,4-Trimethylbenzene; 1,3,5-Trimethylbenzene) and inorganic parameters (total dissolved solids (TDS), chloride ion, sulfate ion).

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

If E&P Waste impacted soils are encountered, approximately 10 cubic yards of the impacted soils will be excavated and removed. If the horizontal and vertical extent of the E&P Waste impacts cannot be defined or removed during this initial action, then additional site investigation and remediation will be performed at a later date under an approved supplemental Form 27. Site data will be evaluated and remediation technologies implemented to meet Table 915-1 soil residential screening levels, protection of groundwater screening levels, or Table 915-1 groundwater and WQCC Regulation 41 numeric and narrative levels as applicable to site conditions.

**OPERATOR COMMENT**

The former OMIMEX PETROLEUM INC. - 66190 BLEDSOE #10-19-5-44 gas well (API #05-125-09958) BLEDSOE-65N44W/19NWSE (Location ID #337245) is in the ECMC Orphaned Well Program ("OWP"). This well is part of an emergency well plugging and abandonment (PA) project to maintain well control. OWP staff observed a section of tubing sticking up from the well. Pre- and post-PA methane monitoring will be performed, with post-PA monitoring occurring at least 5 days following plugging. Flowlines will be decommissioned during a future OWP project to remove or abandon flowlines in place following discussion with the landowner and ECMC Director approval. The Location lies within CPW mapped high priority habitat (HPH) for Greater Prairie Chicken Lek Site (Rule 1202.c) and Greater Prairie Chicken Production Area (Rule 1202.d). This Form 27 Initial presents the site investigation and remediation workplan for wellhead cut and cap sampling following PA. Soils from the four sidewalls will be field screened and observed for evidence of E&P Waste impacts. At a minimum, soil samples collected from the sidewall exhibiting the highest degree of E&P Waste impacts, or the expected downgradient sidewall in the absence of impacts, and the excavation floor sample will be submitted to an accredited environmental laboratory for analysis of full Table 915-1 parameters. A stand-alone laboratory secured PDF copy of the analytical results and the wellhead decommissioning package will be submitted attached to a Form 27 Supplemental within 90 days from the date these documents are received.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
