Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Monday (08-08-16) at approximately 10:00 AM a release was discovered at Carney 41Y34 (API 05-103-09149) (T&A well). The spill was all contained on the well location by the location berm. Approximately 201 BBLs of rainwater filled the well locations cellar and mixed with and released approximately 0.57 BBLs Oil. The location was examined for leaks and no leaks were found. The 160 bbls of water and 0.57 bbls of oil were recovered. The oil remaining in place after the liquids were removed was recovered and taken to the landfarm. The cellar is being cleaned and the hose entry port that allowed rainwater to enter the cellar as the low point on location is being filled to prevent reoccurrence. BLM and COGCC were verbally notified on Monday night and appropriate forms are being filed within their timelines.
