COMMENTS:

A form 4 abatement system mitigation plan for this well was approved on 6/1/2023. The abatement system was installed and opened on 9/25/2023. The most recent approval for the continued use of this mitigation was on 6/11/2024. A gas sample was collected on 4/15/2025, and the composition was 4 mol % ethane, 0 mol % hydrogen, 81 mol % methane, and 10 mol % nitrogen. This gas sample indicates Bradenhead gas to be microbial gas or a mixed microbial / thermogenic gas. No flow rate data has been collected. On 5/13/2025 a form 17 was completed with a starting pressure of 35 psi and an ending pressure 0 psi. The well was shut in for over seven days prior to the form 17 being performed. Water and gas were present at the start of the test and continued for the duration of the test. We will continue to use this mitigation strategy for the next 12 months to maintain bradenhead pressures below the 50-psi threshold. Pressure did not exceed the bradenhead action pressure threshold while the system was operating. At the end of the period, Chevron will perform another form 17 test, and a follow up Form-4 will be submitted to the ECMC. Please note there is a discrepancy between the Form 17 and the transducer, the transducer has been recalibrated.
