Operator Comments:

KMOG is requesting approval to install a permanent refillable 70-gallon liquid nitrogen tank on the Reisbeck 61N66W #18NESE (location 305213). This installation will reduce emissions and the environmental impact by providing instrument air, instead of natural gas, to operate the pneumatically controlled wellhead valves for the Reisbeck 9-18 well.

This request is related to sundry 404225041, which requests the installation of a permanent refillable 70-gallon liquid nitrogen tank on the Denver 36-18 tank battery (location 319477). The nitrogen tank will provide instrument air, replacing natural gas, to operate the pneumatically controlled facility equipment for the following well: Denver 15-18, 23-18, and 25-18 (location 319477) and Reisbeck 9-18 (location 305213).

No additional flowlines will be installed to this well pad, as the nitrogen tank is set at the facility, and this nitrogen tank installed on the well pad. This tank will supply instrument air to operate the pneumatically controlled wellhead equipment for the Reisbeck 9-18 well.

There will be a slight increase in traffic, as a nitrogen truck will refill the tanks approximately once every 30 days.

This equipment is not expected to result in additional light, or noise impacts to surrounding stakeholders.

Please see attached plot plan for details.

KMOG plans to install the new equipment on June 15, 2025.
