COMMENTS:

This well started mitigation in December 2019. The pre-P&A bradenhead test conducted 12/4/2024 (Form 17 doc# 404016673) reported 0 psi and no flowrate was obtained due to no pressure.
This well was tied into the facility until P/A operations were conducted to effectively keep the bradenhead pressure below the action threshold. This can be seen in the pressure trends (charts attached).
Sample results show the bradenhead gas is thermogenic but it doesn't match with the production gas results.
Crestone is submitting this sundry to close out the Bradenhead PMP following P&A operations.
