Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This form is being submitted to comply with ECOM Rules 911.a.(4), 913.a., 913.b.(1), 913.b.(2), and 913.c.(9). The form serves as the initial notification to abandon the well's wellhead and its associated flowlines (if applicable) at Facility ID: 31284.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Wesco will collect a minimum of 1 and maximum of 7 confirmation soil samples. One base confirmation soil sample will be collected from the base of the excavation footprint immediately adjacent to the cut and capped well. One sample will be collected from each of the four sidewalls of the open wellhead excavation for field screening purposes, if impacts are observed, the sidewalls will be submitted for laboratory analysis. Wesco will collect flowline samples from areas where the lines would have transitioned from below ground to above ground (90s), collected 6-12 inches below the 90s. One five-point composite confirmation sample will be collected from stockpiled material associated with the excavation. The five-point aliquot will be thoroughly mixed prior to field screening and jarring. A site-specific background soil sample will be collected to further establish naturally occurring soil concentrations in the area.

Continued in "Operators comments" section.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):
