General Comment:

This is an Environmental Inspection in response to a reported spill from the Slugger 22 wellhead.

Citizen provided photos (attached) show a leak of suspected produced water from wellhead. This inspector found the leaking wellhead to be the Slugger 22 (API 05-067-09752) wellhead. Due to rain at the time of inspection the visible spill from the citizen photo was not visible but visible salt staining on the wellhead and a small stuffing box leak was observed (see attached video). See corrective actions.

Previous corrective action from Inspection 714002065 documenting stained soil around pumpjack and mufflers has not been addressed.

Previous corrective action from Inspection 714002065 documenting inadequate wildlife protections (netting) at produced water tank secondary containment has been partially addressed but is still in violation. One tank has inadequate netting (see attached photos).
