COMMENTS:

A form 4 fluid pull mitigation plan for this well was approved on 7/6/2023. The most recent approval for the continued use of this mitigation was on 11/22/2024. A gas sample was collected on 3/11/2025 and the composition was 0 mol % ethane, 0 mol % hydrogen, 0 mol % methane, and 99 mol % nitrogen. Nitrogen is used to pull fluid from the bradenhead. Because the cement passes the well's producing zone, some residual methane is expected. Chevron performed attempted a fluid pull on 2/25/2025 but was unsuccessful. On 3/3/2025 we returned and performed a fluid pull that had a starting pressure of 8 PSI. During the fluid pull we collected 45 gallons of fluid from the bradenhead. No flow rate data has been collected. On 4/14/2025 a form 17 was completed with a starting pressure of 0 psi and an ending pressure of 0 psi. The well was shut in for over seven days prior to the form 17 being performed. No flow was observed during the test. We will continue to use this mitigation strategy for the next 12 months to maintain bradenhead pressures below the 50-psi threshold. Pressure did not exceed the bradenhead action pressure threshold while the system was operating. At the end of the period, Chevron will perform another form 17 test, and a follow up Form-4 will be submitted to the ECMC. Please note there is a pressure transducer discrepancy at the begining of March 2025, the transducer has been recalibrated.
