

**Stage 2 Data Validation Memorandum
Chevron Bishop Loss of Containment Response Site
Galeton, Colorado
Solid Samples
Sample Delivery Group: L1854739
Report Date: May 23, 2025**

This quality assurance (QA) review is based upon an examination of the data generated from the analyses of the one solid sample and associated quality control (QC) samples collected on May 2, 2025, at the Chevron Bishop Loss of Containment Response Site in Galeton, Colorado. This sample was analyzed by Pace Analytical National Center for Testing and Innovation (Pace National) of Mount Juliet, Tennessee, for volatile organic compounds (VOCs) by SW-846 Method 8260D, semivolatile organic compounds (SVOCs) by SW-846 Method 8270E, total metals by SW-846 Method 6010D, nitrate-nitrite by SW-846 Method 9056A, ammonia nitrogen by US EPA Method 350.1, total nitrogen by calculation, total Kjeldahl nitrogen (TKN) by Standard Method (SM) 4500-NORG-D, and total organic carbon (TOC) by American Society of Agronomy (ASA) Walkley-Black method.

This review was performed in accordance with the Bishop Loss of Containment, Galeton, Colorado Environmental Sampling and Analysis Plan (CTEH; Version 1.4, May 7, 2025), the Bishop Loss of Containment Incident Draft Quality Assurance Project Plan (QAPP; Environmental Standards, Inc. [Environmental Standards]; Version 1.0, April 25, 2025), and the above-referenced analytical methods. This review was performed with guidance from the National Functional Guidelines for Organic Superfund Methods Data Review (US EPA, 2020) and the National Functional Guidelines for Inorganic Superfund Methods Data Review (US EPA, 2020). These validation guidance documents specifically address analyses performed in accordance with the CLP analytical methods and are not completely applicable to the type of analyses and analytical protocols performed for the SM, SW-846, US EPA, and ASA methods utilized by the laboratory for the sample. Environmental Standards used professional judgment to determine the quality of the analytical results and compliance relative to the SM, SW-846, US EPA, and ASA methods utilized by the laboratory.

Summary

The analytical results and associated laboratory QC samples were reviewed to determine the integrity of the reported analytical results and to ensure that the data met the established measurement quality objectives. This QA review includes all samples in Pace National Sample Delivery Group (SDG) L1854739.

The sample that has undergone Stage 2 data validation is listed below:

| Sample Identification | Laboratory Sample Identification | Laboratory SDG | Matrix | Date Sample Collected | Parameters Examined |
|-----------------------|----------------------------------|----------------|--------|-----------------------|---|
| GACO0502T129-1S001 | L1854739-01 | L1854739 | Solid | 5/2/25 | VOC, SVOC, M, N+N, NH ₃ , TN, TKN, TOC |

Notes:

- VOC - VOCs by SW-846 Method 8260D.
- SVOC - SVOCs by SW-846 Method 8270E.
- M - Total Metals by SW-846 Method 6010D.
- N+N - Nitrate-Nitrite by SW-846 Method 9056A.
- NH₃ - Ammonia Nitrogen by US EPA Method 350.1.
- TN - Total Nitrogen by Calculation.
- TKN - TKN by SM 4500-NORG-D.
- TOC - TOC by ASA Walkley-Black Method.

ITEMS REVIEWED

| | |
|--|---|
| Chain-of-Custody (COC) Record and Case Narrative | Sample Preservation and Condition Upon Laboratory Receipt |
| Holding Times | Surrogate Recovery |
| Blank Results | Laboratory Duplicate Results |
| Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) Results | Matrix Spike and Matrix Spike Duplicate (MS/MSD) Results |
| Results Reported Between the Method Detection Limit (MDL)/Reporting Limit (RL) and Quantitation Limit (QL) | Percent Solids |

Comment

- The laboratory personnel/courier did not sign or record the date and time relinquished on the second line of the COC Record.

Based on the items included in this QA review, the following qualifiers are offered.

| Analyte | Sample | Validation Qualifier | Reason for Qualification |
|-----------------|--------------------|----------------------|--------------------------|
| nitrate-nitrite | GACO0502T129-1S001 | U | BL |
| chloroethane | GACO0502T129-1S001 | UJ | LC- |
| total nitrogen | GACO0502T129-1S001 | J | CR |
| TKN | GACO0502T129-1S001 | J- | MS- |

- All positive results reported between the MDL/RL and QL should be considered estimated and have been flagged "J" (unless previously flagged "U") on the data tables. (Reason Code RL)
- For results qualified "not-detected" due to blank contamination, the MDLs/RLs and QLs (if the reported results exceeded the QL) have been elevated to the original laboratory-reported result, the laboratory-reported result has been removed from the result field, and the detect flag has been changed to "N."
- When sample results were qualified both as estimated with a direction of bias ("J+" or "J-") and as estimated with unknown bias ("J") or the opposite bias, only the unknown bias qualifier has been included on the data tables.

SECTION 2

ANALYTICAL RESULTS

DATA QUALIFIERS

- U** The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+** The result is an estimated quantity, but the result may be biased high.
- J-** The result is an estimated quantity, but the result may be biased low.
- UJ** The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- NJ** The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.

REASON CODES AND EXPLANATIONS

| Reason Code ¹ | Description |
|--|---|
| ¹ For any Reason Code that does not indicate that the potential bias is indeterminate, the "+" or "-" reason code may be appended to the qualification reason code in order to indicate a direction of bias (e.g., MS+ would be used to indicate potential high bias due to a high matrix spike recovery) | |
| + | The associated quality control item indicates a potential high bias in the sample result |
| - | The associated quality control item indicates a potential low bias in the sample result |
| AST | Compound not quantitated against an authentic standard; potential bias indeterminate |
| BF | Contamination present in a field blank (e.g., Field Blank, Equipment Blank, etc.); evaluation criteria exceeded |
| BL | Contamination present in a laboratory blank (e.g., Method Blank, Instrument Blank, etc.); evaluation criteria exceeded |
| BN | Elevated detection limit or estimated result due to negative instrument drift (e.g., negative instrument blank result with an absolute value > 2× the method detection limit) |
| BT | Contamination present in the Trip Blank; evaluation criteria exceeded |
| CC | Possible contamination due to carryover from a previous sample |
| CR | Calculated result in which one or more of the components has been qualified |
| CRQ | Calculated result flagged due to reporting protocol |
| CT | Cooler temperature criteria not met |
| CV | Continuing calibration verification evaluation criteria not met |
| CY | Chemical Yield recovery criteria not met |
| DI | Detector instability (radionuclide chemistry); potential bias indeterminate |
| EC | Result exceeds the calibration range; potential bias indeterminate |
| FD | Field duplicate imprecision; potential bias indeterminate |
| FP | Target compound identification criteria not met; potential false positive |
| GH | Headspace present in the gamma spectrometer sample analysis vessel; potential bias indeterminate |
| GS | Low sample density in the gamma spectrometer sample analysis vessel; potential bias indeterminate |
| HT | Holding time exceeded |
| HV | Headspace present in volatile vials |
| IC | Initial calibration evaluation criteria not met |

| Reason Code ¹ | Description |
|--------------------------|--|
| IN | Interference (e.g., laboratory, chemical, chromatographic/instrumental, and/or matrix) present in the analysis |
| IR | Interference check standard evaluation criteria not met |
| IS | Internal standard evaluation criteria not met |
| LC | Laboratory control sample/laboratory control sample duplicate recovery criteria not met |
| LCP | Laboratory control sample/laboratory control sample duplicate precision criteria not met; potential bias indeterminate |
| LD | Laboratory duplicate precision criteria not met; potential bias indeterminate |
| LR | Linear range exceeded; potential bias indeterminate |
| MDP | Laboratory deviated from the method for a method-defined parameter, based on regulatory requirements |
| MS | Matrix spike/matrix spike duplicate recovery criteria not met |
| MSP | Matrix spike/matrix spike duplicate precision criteria not met; potential bias indeterminate |
| NQC | Absence of supporting quality control samples |
| PD | Post-digestion spike recovery criteria not met |
| OT | Other deficiencies, see validation report for additional details |
| PM | Performance evaluation mixture criteria not met |
| PS | Low percent solids; potential bias indeterminate |
| PT | Chromatographic pattern in sample does not match pattern of calibration standard |
| QCI | Quantitation/confirmation ion ratios in sample are inconsistent with reference spectra; potential bias indeterminate |
| RA | Replicate/multiple analyses criteria not met; potential bias indeterminate |
| RM | Reference material recovery criteria not met |
| RL | The analysis meets all qualitative identification criteria, but the measured concentration is between the method detection limit and the quantitation or reporting limit; potential bias indeterminate |
| RS | Reporting limit standard(s) outside of acceptance limits |
| SA | Method of standard additions criteria not met; potential bias indeterminate |
| SC | Relative percent difference between two columns exceeds criteria; potential bias indeterminate |
| SCC | Second column confirmation was not performed as required by the analysis method |

| Reason Code ¹ | Description |
|--------------------------|--|
| SCT | Sample counting time error (radionuclide chemistry); potential bias indeterminate |
| SD | Serial dilution results did not meet evaluation criteria |
| SP | Sample preservation criteria not met |
| SR | Surrogate recovery criteria not met |
| SS | Second source calibration verification/initial calibration verification criteria not met |
| ST | Sample container type incorrect |
| SU | Sample result is less than the two-sigma uncertainty |
| SUN | Absolute value of the negative sample result is greater than the two-sigma uncertainty |
| SW | Sample switch suspected |
| TD | Result for dissolved constituent significantly exceeded result for total constituent; potential bias indeterminate |
| TIR | Tentatively identified compound; observed in an associated laboratory, equipment, field, or trip blank. |
| TN | Instrument tune criteria not met |
| Y | Potential bias due to the y-intercept in the calibration curve significantly affecting the analyte response |
