|                           |  |   |
|---------------------------|--|---|
|                           | This location does not meet final reclamation standards. The access road remains bare soil and the soil was heavily compacted when compared to surrounding soil. Undesirable weed kochia and list C noxious weed cheatgrass are present throughout the access road, wellbore and tank battery area with little establishment of desirable perennial species. It appears reclamation may have been conducted on the access road and wellbore area. Germination was not observed at the time of inspection. The former interim disturbance area appears to have desirable vegetation that is progressing towards 80% of the reference area. See attached pictures. |   |
| Corrective Action:        | Conduct additional reclamation according to Rule 1004 such as decompaction and cross ripping to a depth of 18 inches. Establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of reference area levels. Ensure erosion controls are implemented to stabilize the seeded soil. Operator shall continue to monitor and manage this site until the location meets Rule 1004 standards, including stormwater and weed management.  | Date _____  |
| Overall Final Reclamation | Fail   | Well Release on Active Location <input type="checkbox"/> Multi-Well Location <input type="checkbox"/> |
