Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

Is further site investigation required?

Grab soil samples indicated that TPH and SAR exceedances were noted at the sample locates at the wellhead and 30' South of the Wellhead based on GW-SSLC. Additional samples will be taken to determine the vertical and areal extent of the contamination. Table 915 Metals will also be taken. Impacted soils will be removed and stored on site until they can be hauled to an approved disposal site.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Visually observed hydrocarbon impacted soil was excavated and moved to the lined containment setup in the Rhoades Unit Compressor Station yard. Sampling will be used to confirm soils that remain will meet Table 915-1 standards. Clean soil will be filled into any excavated locations.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Remaining stained surface soils will be scraped, piled on liner, and sampled to determine if they are considered impacted above Table 915 standards. If any contaminated soils are determined, these soils will be loaded and hauled to either the lined containment at the Rhoades Unit Compressor Station for land treatment (if approved) or will be temporarily stored until volumes can be hauled to an approved waste disposal site. Closure samples will be taken and analyzed per the rule, though if contamination is noted of a certain type (e.g., hydrocarbon or salt or metals) any additional samples will be analyzed for the compound(s) that were found to exceed Table 915-1 and not all Table 915 compounds.
