Re: Completion Report
Sohio Petroleum Company
Larson 4-12
NW SW Sec. 4, T3S, R64W
Adams Co., Colorado

Dear Mr. Rogers:

Attached is a completion report on the captioned well. The well was opened and fracture stimulated in the 'D' Sand in late February, 1983. Following recovery of frac load, the well was briefly tested on 3/1/83 then shut in for bottom hole pressure survey and installation of production facilities. Inclement weather and muddy ground conditions have prevented completion of this work and a GOR determination has not yet been made. The completion report is being submitted at this time due to the time limit imposed under Rule 306. We apologize for exceeding the 30 day time limit.

Following completion of the production facility hookup, flow testing will commence to permit GOR determination by potential gas purchasers. Following GOR determination, an OGCC Form 9 will be filed per Rule 309.

As this well is a "Tite Hole", confidentiality is requested for the minimum time period provided for in State rules.

Sincerely,

W.H. Ward
District Manager
