BRADENHEAD MITIGATION PLAN

Western Operating Company (Western), has drafted this plan in accordance with Rule 419.b.(4).C.

This well underwent its annual 2025 bradenhead test on March 24, 2025, reported on Form 17, Document #404151064. Bradenhead threshold for the Linnebur #6-23 is 50 psig. All casings held their pressures during the test.

Western will continue to monitor the bradenhead pressure regularly.

Western will blow down the bradenhead pressure to the gas sales line as necessary to mitigate high pressures.
