## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	SOILS	TBD	Lab Analysis

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

In accordance with ECMC Rule 911, this form serves as notification for the decommissioning and abandonment of the Fassler 1-28 production facility, including production tanks, heater treater, and pumping unit. Soils surrounding and beneath production equipment will be visually inspected during decommissioning activities and confirmation soil sampling will be conducted to assess potential hydrocarbon impacts. Areas of potential spills/releases noted in inspection doc #709100514 will be investigated as part of facility decommissioning activities.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Soil samples will be collected from the areas most likely to have been impacted during the operational life of the facility. These areas include, but are not limited to, wellheads, tanks, separators, treaters, and flowlines. Background samples obtained from similar depths and soil horizons or lithologic materials for comparison to confirmation soil samples will be collected as part of this investigation. In addition, areas visibly impacted by hydrocarbons will be sampled. All samples will be submitted to a NELAP-accredited laboratory for the full Table 915-1 analysis. A proposed soil sample location map is included as an attachment to this report.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered during facility decommissioning activities, a minimum of one grab sample will be collected as soon as practical. Groundwater samples will be submitted to a NELAP accredited laboratory for analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, 1,2,4-TMB, and 1,3,5-TMB using standard methods appropriate for detecting the target analytes in CECMC Table 915-1.

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

If no impacts are observed, a minimum of one soil sample from the wellhead, separator riser, and the areas most likely to have been impacted during the operational life of the flowline will be submitted to an NELAP accredited laboratory for analysis using standard methods appropriate for detecting the target analytes in CECMC Table 915-1.
