DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	HtrTrtr Site, Pit #1 & #2	Sampling

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Initial sampling associated with the abandonment of the Harpham production facility, (2) produced water pits, and 1,850' buried flow line

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Samples will be obtained to determine if soils will meet table 9-15 standards. Samples will be grab samples. Approximately (23) samples will be taken, samples will be from the site of each tank, the heater treater, and a set of samples from each produced water pit (center, 4 corners, and each side wall). Samples for the buried flowline will be based on visual observations during excavation.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

If ground water is encountered, a ground water sample will be taken and evaluated.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? Yes

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The production facility equipment has been removed. The 1,850 foot buried flowline will be dug up and removed. Soils are found to not meet TPH threshold in Table 9-15 will be dug and hauled to an approved waste disposal facility. SAR impacted soils at depths greater than 72" bgs is being requested to be left in place.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

See attached remediation action plan. Summary, PADCO will scrape off any clean surface gravel and removed or bury in the pit (with written landowner approval). Soils with TPH, BTEX, Naphthalene contamination will be dug out/loaded/hauled to an approved waste soil disposal site. High SAR, EC, Boron soils will be dug out/loaded/hauled to an approved disposal site. SAR soil is requested to be left in place at depths >72" (crop root depth is 60"). Flowline will be excavated, photos, and samples per attached plan. Closure samples will be taken and analyzed.
