## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Gulf Designation: **Daly-Federal No. 1. Confirming Charles to Finnegan 3-23-60.**

It is proposed to drill a development well to test the Muddy, Dakota and Lakota formations, estimated total depth 5600'. It is proposed to set approximately 350' of 10-3/4" OD surface casing cemented to the surface.

If commercial production is encountered, 5-1/2" oil string casing will be set. All possible producing horizons will be adequately evaluated either by coring, drill stem testing, or electric logs.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
