### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Wellhead cut and cap operations were completed at the Barclay 2-16K and Barclay Farms L11-27D wellheads on 1/24 and 5/5/2025. Groundwater was not encountered during wellhead cut and cap operations. Visual inspection and field screening of soil around the wellheads and associated pumping equipment were conducted following cut and cap operations. Soil samples [B01(2-16K)@6' and B01(L11-27D)@6'] were submitted for analysis of full list ECMC Table 915-1 constituents, to determine if a release occurred. The flowlines associated with the wellheads were removed on 5/5 and 5/16/25 and soil samples were collected from where the flowline was disconnected from the Barclay Farms L11-27D wellhead [WH-Riser(L11-27D)@5], and from where the flowlines changed directions [FL01(2-16K, L11-27D)@4]. The samples were submitted for analysis of full list Table 915-1 constituents to determine if a release occurred. Laboratory analytical results indicated that polycyclic aromatic hydrocarbon (PAH) impacts exceeding the Table 915-1 allowable levels were present at the Barclay Farms L11-27D wellhead riser, and the FL01 locations. As such, Form 19 Initials (Document Nos. 404218820 and 404231299) were submitted on 5/29 and 6/6/25 and the ECMC issued Spill/Release Point ID 490341. The other Spill/Release Point ID is pending. The wellheads and flowlines are depicted on Figures 1 and 2. The PID readings and soil sample results are summarized in Tables 1 and 2, respectively.

Separator riser and the Barclay 2-16K wellhead riser sampling are pending. Assessment activities are ongoing and details will be provided in a subsequent Form 27 supplemental report.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Between 1/24 and 5/16/2025, soil samples were collected from the wellhead excavations [B01(2-16K)@6' and B01(L11-27D)@6'], from where the flowline was disconnected from the Barclay Farms L11-27D wellhead and from where the flowlines changed directions [FL01(2-16K, L11-27D)@4] at depths ranging from 4 to 6 ft below ground surface (bgs). The samples were submitted for analysis of full Table 915-1 constituents, using ECMC-approved methods. Laboratory analytical results indicated that polycyclic aromatic hydrocarbon (PAH) impacts exceeding the Table 915-1 allowable levels were present at the Barclay Farms L11-27D wellhead riser and the FL01 locations. Assessment activities are ongoing. The laboratory reports are attached.

#### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Groundwater was not encountered during wellhead cut and cap or flowline removal activities.

## Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Between 1/24 and 5/16/2025, visual inspection and field screening of soil were conducted at eight sidewall locations within the cut and cap excavation areas and eight locations at the ground surface adjacent to the cut and cap excavation areas, and two flowline potholes. Based on the inspection and screening results, hydrocarbon-impacted soil was not observed at the screening locations, and no soil samples were submitted for laboratory analysis from these areas, in accordance with the ECMC Operator Guidance. A photographic log is attached.

On 2/6 and 5/13/2025, soil gas surveys were conducted at ten soil vapor points installed adjacent to the former wellhead locations following cut and cap operations. GEM 5000 field readings were all non-detect for methane at all soil vapor points. The soil vapor point locations are illustrated on Figure 1. The soil vapor field forms are included as an attachment.

Sixteen background soil samples (NATIVE-BG01@3' through NATIVE-BG08@3' and NATIVE-BG01@6' through NATIVE-BG08@6') were collected from the native material outside of the wellhead excavation areas. The background soil samples were submitted for laboratory analysis of pH, EC, SAR, boron, and ECMC Table 915-1 metals, using ECMC-approved methods.
