Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 8/7/2025, Karch Blue D4-2,7 tank battery site investigation activities were completed. During the completion of the activities, no potential presence of impacted material(s) was observed/smelled. Consistent with Rule 912, samples were collected and analyzed to determine whether any constituents are present at levels in excess of Table 915-1 standards. Final laboratory analytical results received on 9/26/2025, indicated that soil sample SS01-SB02, discovered in the vicinity of the former tank battery, exceeded ECMC Table 915 standards for Naphthalene at 0.010 mg/kg. Groundwater was not encountered during decommissioning activities. This location is within 300 feet of waters of the state. All data collected will be submitted with the Supplemental Form 19 for REM 12287.
