

PARCEL ACTIVITY SUMMARY REPORT

T150 | FACILITY ID 490033

Galeton, Colorado

Bishop LOC

9/30/2025

1.0 INTRODUCTION

This Parcel Activity Summary (Summary) is being submitted in response to ECMC's August 26, 2025 Condition of Approval associated with Document Number 404194354. This Summary provides a detailed overview of the:

- Site investigation activities completed to date
- Number and types of samples collected by location

The information in this Summary is derived from data collected and activities undertaken consistent with the Offsite Structure Cleaning Plan, Environmental Sampling and Analysis Plan (ESAP), Rapid Assessment Technique Plan, Water Well Sampling and Analysis Plan (WWSAP).

As such, the included and referenced estimated dates and investigation/remediation approaches are subject to revision based on the receipt of additional data being generated as part of ongoing response efforts, including site investigation and remedial action tasks.

2.0 SITE INVESTIGATION AND REMEDIAL ACTIONS COMPLETED TO DATE

- **Rapid Assessment Technique (RAT) Survey** - A RAT Survey was conducted on April 30, 2025 in accordance with the Rapid Assessment Technique Plan. The Survey involved several team members walking the accessible area of the parcel and documenting findings, including photos, geolocations, and oiling observations. The Survey consisted of 19 visual observations. Below is a summary of the RAT observations:

- 19 observations - No source material observed
- 0 observations - Possible source material observed
- 0 observations - Source material observed

A complete RAT summary package was submitted on ECMC document number 404194354 and can be referenced for additional information such as field photographs and maps.

- **Initial Parcel Assessment** - The Initial Parcel Assessment was conducted on April 30, 2025. The Assessment consisted of a team of subject matter experts, including an agronomy expert, a vegetation expert, and others, assessing the parcel in order to determine whether there were visible impacts to the property and whether additional actions were necessary. No impact to vegetation was noted, and no cleaning is recommended.

- **Comprehensive Grid Soil Sampling** - Comprehensive grid sampling was conducted on April 30, 2025. One discrete grab sample was collected at 0-6 inches from a randomly generated location per approximately 40,000 m² (~9.9 acres) grid. Final validated analytical data received to date was previously submitted on Form 27 Initial (Document # 404194354).

- **Water Well Sampling** - Water well sampling was conducted on May 16, 2025 per the Water Well Sampling and Analysis Plan (WWSAP). Any detections and exceedances of applicable screening criteria detected in the sample results are detailed below in Table 2.

Sampling Activity Number	Sampling Activity Date	Type of Sampling	Media	Source Location	Depth of Samples	Number of Parent Samples	Number of QC Samples
1	4/30/2025	Grid Sampling	Soil	A map of sampling locations was previously submitted on Form 27 Initial (Document # 404194354), Form 27 Supplemental (Document # 404371829).	0-6 in	1	0
2	5/16/2025	Well Sampling	Water		Not applicable	1	0
