COMMENTS:

It is recommended that an MIT not be completed on this well due to not wanting to kill the well in preparation to put the well on production.

The most recent bradenhead test shows that there is no communication between the 7" production casing and the surface casing. The current production casing pressure is 2000 psi. Surface casing/production casing annulus is at 0 psi. The bond log of the 7" production indicates Document number 2318017 indicates bond above 1850'.

The 7" is cased across zones that are normally pressured, if there was a lack of mechanical integrity the pressure of the production casing would not be 2,000 psi.

The alternative MIT test demonstrates this well has mechanical integrity and protects the health, safety, and welfare of the environment and wildlife resources.

The pressure of the production casing will be monitored monthly while the well is shut in. We plan on getting the well on production as soon as an economic analysis is performed and install production facilities with ECMC approval,
