Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The lease operator noticed an anomaly in the flowline trend on the 8016D well on the M11 498 pad. The lease operator went to the location and confirmed a flowline failure through pressure testing. No fluids came to surface during the pressure test. The well was shut in, the line was isolated, and proper notifications were completed.
