Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 8/13/2025 at approximately 11:05 am, a produced water release was discovered by a IKAV employee at the Southern Ute DD 4 location. The source of the release was the well head rod packing for the pumping unit. The employee was able to immediately stop the release upon discovery. An estimated 54.9 BBLs of produced water was released to the ground surrounding the well head and pumping unit and remained on the well pad. Simcoe was able to get a vac truck dispatched and recover approximately 10 BBLs of produced water. The spill did not leave location and did not threaten surface water, livestock or wildlife. Simcoe employees were able to replace the rod packing of the pump jack in order to prevent the leak from reoccurring. Sampling and Mapping will take place possible as soon as 8/14/2025.

  - SUSPECTED Spill/Release did not occur or was below Rule 912.a.(5) reporting thresholds.

**OPERATOR COMMENTS:**

Soil sampling indicates elevated levels of SAR, pH, and Arsenic. Simcoe treated the release with Biogen SA-1000© on 9/10/2025. Simcoe would request future soil sampling constituents be reduced to SAR, EC, pH, and arsenic only.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
