Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 3/26/2025, MILE HIGH SHEEP 8-32 Flowline decommissioning activities were completed. During the completion of the activities, no potential presence of impacted material(s) was observed/smelled. Consistent with Rule 912, samples were collected and analyzed to determine whether any constituents are present at levels in excess of Table 915-1 standards. Final laboratory analytical results received on 5/14/2025 indicate that soil sample, FL01R-W@4', discovered at the flowline riser wellhead sample location, exceeded ECMC Table 915 standards for benzo(a)anthracene at 0.0443 mg/kg, Groundwater was not encountered during flowline decommissioning activities. This site is within the Mule Deer Severe Winter Range High Priority Habitat.

CORRECTIVE ACTIONS

#1 Supplemental Report Date: 05/15/2025

Root Cause of Spill/Release Unknown (Historical)

Other (specify) _____

Type of Equipment at Point of Spill/Release: Wellhead Line

If "Other" selected above, specify or describe here:

Describe Incident & Root Cause (include specific equipment and point of failure)

Historical impacts were discovered during flowline decommissioning activities along the flowline where the area is most likely to be impacted. Due to the historical nature of the release, an exact cause was not able to be identified.

Describe measures taken to prevent the problem(s) from reoccurring:

Noble conducts routine AVO inspections of all oil and gas flowlines in order to identify and mitigate potential releases. Further, this flowline is no longer active and is in the process of being decommissioned. The flowline has been taken out of service and there is no longer a possibility of a release originating from this infrastructure.
