COMMENTS:

On 10/22/2025 a Form 17 was completed with a beginning pressure of 61 psi and an ending pressure of 0 psi. Gas was present at the start of the test but were not continuous. Fluid was present for the entire test. Due to the initial high pressure and continous flow, we would like to add this well to our mitigation program. We would like to open the bradenhead to the existing abatement system, which does not vent gas to keep pressure below 50 psi threshold. We will monitor pressures and at the end of the 6 months, we will perform an additional Form 17 and a Form 4 follow-up will be submitted.

<u>COA Type</u>	<u>Description</u>
1 COA	<ol style="list-style-type: none"> 1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare. 2. Bradenhead gas is not to be vented to the atmosphere; any gas from the Bradenhead will be routed to the specified abatement system. Shut in bradenhead pressure shall not exceed threshold pressure. Operator will implement measures to get an estimate of the gas flow rate and/or volume from the bradenhead. 3. No later than 4/22/26, conduct a bradenhead test, submit a Form 17, and submit a Form 4 Sundry that summarizes current well condition. The well should be shut in for seven days to monitor and collect data to characterize build up pressures prior to conducting the bradenhead test. The sundry should include details of the future plans, sample analysis interpretation, bradenhead test description, and the flow rate information and pressure data. 4. If a sample has not been collected from surface casing within the last twenty-four months collect bradenhead gas samples for laboratory analysis.
