## **INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation was conducted during the decommissioning of HSR-Kinzer T5N-R67W-S23 L01 (aka HSR-Kinzer 4-23) Tank Battery on 3/05/2024. Laboratory soil samples were collected from the partially buried produced water vessels' (PWVs) excavations bases (FS01@4', FS02@4'). Field screening samples were collected in each cardinal direction from the sidewalls of the excavations adjacent to each vessel. The screening samples with the highest PID (SS03@3', SS05@3') were collected for laboratory analysis from the sidewalls. Laboratory samples were also collected beneath the onsite above ground storage tanks (AST01@0.5', AST02@0.5'), the flowline risers at the separator (SEP01-FL1@3', SEP01-FL2@3'), and separator dumpline (SEP01-DL@3').

Analytical results indicated that organic compound concentrations were below Table 915-1 in all confirmation soil samples collected. Groundwater was not encountered during the tank battery decommissioning.

## **PROPOSED SAMPLING PLAN**

### **Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Sampling was conducted as described in the Initial Action Summary of this Form 27. Sampling deviated from the approved sampling plan in Initial Form 27 # 403602531 because samples were collected for a second produced water vessel that was not marked on the sampling map. Sampling was in accordance with ECMC guidance. Soil samples were analyzed by a certified laboratory for the full extent of Table 915-1, including but not limited to: TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, and EC, SAR, pH, boron, and Table 915-1 metals.

### **Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered during the site investigation, a grab groundwater sample will be collected and analyzed for all organic and inorganic compounds per ECMC Table 915-1. This sample analysis includes, but is not limited to: BTEX, naphthalene, 1,2,4-trimethylbenzene (TMB), and 1,3,5-TMB by EPA Method 8260; chloride and sulfate anions by EPA Method 300.0; and total dissolved solids (TDS) by Method SM 2540C.

### **Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## **Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection at the tank battery area occurred during decommissioning activities. Field personnel screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. A detailed summary of decommissioning activities, including field notes, site photos, figures, and laboratory analytical results, was attached to Form 27 # 403753673.

On 03/05/24, three background soil samples were collected from one discrete location (BKG01) near the tank battery. The background data was reported in Form 27 # 403753673. After reviewing the data from the site investigation, it was determined that the samples were not collected at a sufficient distance from the impacted area and are not/will not be considered in the background analysis for this site.

Is further site investigation required?

A supplemental site investigation (SSI) was completed on 11/20/2025 to collect additional background samples to determine if arsenic, barium, lead, and pH concentrations are attributed to native soil conditions at the site. Background samples were collected at six borings (BKG02-BKG07) from depths ranging from 2-15 feet below ground surface (ft bgs). Background samples were analyzed for Table 915-1 metals, pH, EC, SAR, and boron.

Laboratory analytical results for the SSI performed on 11/20/2025 are pending. Following the receipt of analytical reports, results will be summarized and provided.
