COMMENTS:

This well started mitigation in February 2021. The bradenhead test conducted 02/10/2021 (Form 17 doc# 402599906) reported 67 psi. Following the previous period of abatement through the facility, Crestone has effectively kept the bradenhead pressure below the action threshold. This can be seen in the pressure trends (charts attached) and the bradenhead test conducted 11/18/2025 (Form 17 doc # 404445648) reporting 21 psi and a total volume of 0.0002 MSCF, flown at an initial rate of 5.1 MCF/D. While there is progress, the build up trend indicates a climb above the action threshold is likely. Crestone believes the well would benefit from continued pressure abatement.

Sample results show the bradenhead gas is thermogenic but not as thermally mature as the production gas. Crestone is confident in the efficacy of the bradenhead pressure abatement system and plans to continue with the current strategy. Crestone will conduct the next annual test in 2026 and provide an update on bradenhead abatement at that time.
