Trey

Approved as outlined with the condition of tagging the plug at 7200' after pumping it.

Thanks Eric

Eric,

During re-entry operations on the State of Colorado 1-10 (05-005-06337) we were able to TD the well with a jetted bit but have struggled to get back down to 7,900' for cement operations. We are currently at 7,288' and lose circulation everytime we drop below 7,200'. With your approval I'd like to pump our Niobrara plug from 7,200' – 6,900' instead of the designed 7,900' – 7,600'. Everything else above will remain the same.

Thanks,

Trey Sloan
