Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 11/12/2025, Steve J18-16 wellhead and flowline decommissioning activities were completed. During the completion of the activities, no potential presence of impacted material(s) was observed/smelled. Consistent with Rule 912, samples were collected and analyzed to determine whether any constituents were present at levels in excess of Table 915-1 standards. Final laboratory analytical results received on 12/22/2025 indicate that soil sample FL02-05, discovered along the flowline, exceeded ECMC Table 915 standards for Naphthalene at 0.0205 mg/kg and Benzo(a)Anthracene at 0.0777 mg/kg. Groundwater was not encountered during decommissioning activities. This location is within the Municipality of Greeley. All data collected will be submitted with the next quarterly Supplemental Form 27 for REM 40257, due by 12/28/2026.

## CORRECTIVE ACTIONS

#1 Supplemental Report Date: 12/23/2025

Root Cause of Spill/Release Unknown (Historical)

Other (specify) \_\_\_\_\_

Type of Equipment at Point of Spill/Release: Wellhead Line

If "Other" selected above, specify or describe here:

Describe Incident & Root Cause (include specific equipment and point of failure)

Historical impacts were discovered during flowline decommissioning activities along the flowline where the PID was the highest. Due to the historical nature of the release, an exact cause was not able to be identified.

Describe measures taken to prevent the problem(s) from reoccurring:

Noble conducts routine AVO inspections of all oil and gas flowlines in order to identify and mitigate potential releases. Further, this flowline is no longer active and is in the process of being decommissioned. The flowline has been taken out of service and there is no longer a possibility of a release originating from this infrastructure.
