### SAFETY SETBACK INFORMATION

Required for change of Surface Location.

Distance from Well to nearest:

- Building: \_\_\_\_\_ Feet
- Building Unit: \_\_\_\_\_ Feet
- Public Road: \_\_\_\_\_ Feet
- Above Ground Utility: \_\_\_\_\_ Feet
- Railroad: \_\_\_\_\_ Feet
- Property Line: \_\_\_\_\_ Feet

#### INSTRUCTIONS:

- Specify all distances per Rule 308.b.(1).
- Enter 5280 for distance greater than 1 mile.
- Building - nearest building of any type. If nearest Building is a Building Unit, enter same distance for both.
- Building Unit – as defined in 100 Series Rules.

### SUBSURFACE MINERAL SETBACKS

Required for change of Top and/or Base of Productive Zone. Enter 5280 for distance greater than 1 mile.

Is this Well within a unit? \_\_\_\_\_

If YES:

Enter the minimum distance from the Completed Zone of this Well to the Unit Boundary: \_\_\_\_\_ Feet

Enter the minimum distance from the Completed Zone of this Well to the Completed Zone of an offset Well within the same unit permitted or completed in the same formation: \_\_\_\_\_ Feet

If NO:

Enter the minimum distance from the Completed Zone of this Well to the Lease Line of the described lease: \_\_\_\_\_ Feet

Enter the minimum distance from the Completed Zone of this Well to the Completed Zone of an offset Well producing from the same lease and permitted or completed in the same formation: \_\_\_\_\_ Feet

### Exception Location

If this Well requires the approval of a Rule 401.c Exception Location, enter the Rule or spacing order number and attach the Exception Location Request and Waivers. \_\_\_\_\_

COMMENTS:

TEP Rocky Mountain LLC (TEP) is submitting this Form 4 to satisfy a request from ECMC engineering staff to provide an update regarding the status of a historically approved bradenhead Pressure Management Plan (PMP) and summarize the current well condition. There is no Condition of Approval (COA) associated with this submittal, as this Form 4 submittal was requested by ECMC engineering staff via electronic communications and in-person meetings.

An annual bradenhead test was performed on 01/10/2025, and the Form 17 reporting the results of this test can be referenced under ECMC Document #404056620.

Since installation, the bradenhead connection to the to the sales line is effectively managing the bradenhead pressure and maintaining a consistent bradenhead pressure below the ECMC calculated threshold pressure of 63 psi. TEP has included the historical monthly pressure data as an attachment.

TEP has completed an additional diagnostic evaluation of the well, and the following lines of evidence continue to demonstrate that the Mobil #W 7-34 has both casing integrity and wellbore isolation:

- The recent bradenhead test results indicate a successful test, and the test results confirm production casing integrity.
- There was a 37-psi pressure differential between the surface casing and the production casing prior to starting the bradenhead test.
- The bradenhead pressure decreased to 0 psi in five minutes with a de minimis volume of gas through a half inch valve.
- The recent analytical results taken 03/05/2025 indicated a carbon dioxide concentration of 2.032% in the production gas sample versus a concentration of 0% in the bradenhead sample. The analytical results of the recent bradenhead and production gas samples have been submitted to the ECMC via a Form 43 (#404134016).

TEP will continue to utilize the Mobil # W 7-34 bradenhead connection to the to the sales line to effectively manage the bradenhead pressure below the BMA threshold pressure as detailed in the previously approved Pressure Management Plan. TEP will also continue to monitor the bradenhead pressures as part of our monthly monitoring and annual testing programs and will report any future bradenhead threshold pressure exceedances as required by Rule.
