Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 1/14/2026, Alexander Federal H4-2JI flowline decommissioning activities were completed. During the completion of the activities, no potential presence of impacted material(s) was observed/smelled. Partial laboratory analytical results received on 1/15/2026, indicate that soil sample FL01-F-R, discovered along the former flowline directional change, exceeded ECMC Table 915 standards for Benzo (a)anthracene at 0.0534 mg/kg, Benzo(a)pyrene at 0.372 mg/kg, Benzo(b)fluoranthene at 0.314 mg/kg, and Naphthalene at 0.047 mg/kg. Groundwater was not encountered during decommissioning activities. This location is within the Mule Deer Severe Winter Range High Priority Habitat. All data collected will be submitted with the next quarterly Supplemental Form 27 for REM 29328.

CORRECTIVE ACTIONS

#1 Supplemental Report Date: 01/16/2026

Root Cause of Spill/Release Unknown (Historical)

Other (specify) _____

Type of Equipment at Point of Spill/Release: Wellhead Line

If "Other" selected above, specify or describe here:

Describe Incident & Root Cause (include specific equipment and point of failure)

Historical impacts were discovered during flowline decommissioning activities along a directional change. Due to the historical nature of the release, an exact cause was not able to be identified.

Describe measures taken to prevent the problem(s) from reoccurring:

Noble conducts routine AVO inspections of all oil and gas facilities in order to identify and mitigate potential releases. Further, this facility is no longer active and is in the process of being decommissioned. The compromised flowline has been taken out of service and there is no longer a possibility of a release originating from this infrastructure.
