Comment:

This location does not meet Final Reclamation requirements. Large areas of bare soil are present around the well turnaround area and down slope of the well location. Subsidence/ depressions are present at the well turnaround area as well as the tank battery area. The tank battery appears to have less desirable vegetation establishment than the surrounding reference area. The access road is slightly contoured/ raised compared to the surrounding area and gravel remains on portions of the access road. See attached photos.

Conduct additional reclamation on the location according to Rule 1004.
