Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A workover rig was on the well; while tripping out of hole with rods the well started flowing up the tubing. Prior to the BOP closing, one barrel of produced water and 0.5 barrel of oil was released to the ground. The BOPs were closed, and the well was shut in. Subsequent to BOP being shut, water was pumped down tubing to kill the well

Yes Rule 912.b.(1).B: A Spill or Release in which 1 barrel or more of E&P Waste or produced fluids is spilled or released outside of berms or other secondary containment.

No Rule 912.b.(1).C: A Spill or Release of 5 barrels or more of E&P Waste or produced Fluids regardless of whether the Spill or Release is completely contained within berms or other secondary containment.

No Rule 912.b.(1).D: Within 6 hours of discovery, a Grade 1 Gas Leak. For a Grade 1 Gas Leak from a Flowline, the Operator also must submit the Form 19 – Initial, document number on a Form 44, Flowline Report, for the Grade 1 Gas Leak

Discovery and reporting will not be contingent upon confirmation samples demonstrating exceedance of Table 915-1 standards. The presence of free product or hydrocarbon sheen on Groundwater or surface water is reportable. The presence of contaminated soil in contact with Groundwater or surface water is reportable. Check all that apply:

- The presence of free product or hydrocarbon sheen Surface Water
- The presence of free product or hydrocarbon sheen on Groundwater
- The presence of contaminated soil in contact with Groundwater
- The presence of contaminated soil in contact with Surface water

No	Rule 912.b.(1).G: A suspected or actual Spill or Release of any volume where the volume cannot be immediately determined, including a spill or release of any volume that daylight from the subsurface.
No	Rule 912.b.(1).H: Spill or Release resulting in vaporized hydrocarbon mists that leave the Oil and Gas Location or Off-Location Flowline right of way from an Oil and Gas Location and impacts or threatens to impact off-location property.  <input type="checkbox"/> Areas offsite of Oil & Gas Location <input type="checkbox"/> Off-Location Flowline right of way

### REQUEST FOR CLOSURE

**Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.**

- Basis for Closure:
- Corrective Actions Completed (documentation attached, check all that apply)
    - Horizontal and Vertical extents of impacts have been delineated.
    - Documentation of compliance with Table 915-1 is attached.
    - All E&P Waste has been properly treated or disposed.
    - Work proceeding under an approved Form 27 (Rule 912.c).  
Form 27 Remediation Project No: \_\_\_\_\_
    - SUSPECTED Spill/Release did not occur or was below Rule 912.a.(5) reporting thresholds.

#### OPERATOR COMMENTS:

Groundwater was not encountered during the excavation. Further, water well (Permit #328549), located approximately 5,400 ft. southeast of Fabrizius 33-14, has a static water level of 50 ft. bgs. Water well (Permit #132932-), located approximately 5,080 ft. northwest of Fabrizius 33-14, has a static water level of 89 ft. bgs. Water well (Permit #286596-), located approximately 6,100-ft northwest of Fabrizius 33-14, has a static water level of 112 ft. bgs. Based on regional depth to groundwater, Bison respectfully requests comparison to Residential Soil Screening Levels (RSSLs) for Table 915-1 allowable levels.

The risk to vegetation and human health is likely negligible given:

- Soil Suitability concentrations at all confirmation sample locations remain below ECMC Table 915-1 Soil Suitability for Reclamation standards or within range of background concentrations seen at the Site;
- Native pH remains highly variable as seen in the source and background samples;
- All metal and organics analyte concentrations remain below ECMC Table 915-1 RSSLs or within range of background concentrations seen at the Site.

Based on the results of the analytical data from January 21, 2026, Bison respectfully requests a No Further Action determination based on the lack of exceedances remaining at the Site.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

**COA Type****Description**

	<p>Based on the information presented, it appears that no further action is necessary at this time and the ECMC approves the closure request. However, if future conditions at the site indicate contaminant concentrations in soils exceeding ECMC standards or if groundwater is found to be impacted, then further investigation and/or remediation activities may be required.</p> <p>The surface area disturbed by the remediation activity shall be reclaimed in accordance with the 1000 Series Reclamation Rules. For locations with active ongoing oil and gas operations, comply with Rule 1003 interim reclamation requirements and for locations that will no longer have active oil and gas operations, comply with Rule 1004 Final Reclamation requirements.</p>
	ECMC approves Operator's request for use of Residential SSLs based on the depth to groundwater and the local lithology suggesting a pathway to groundwater at this location is not likely.
