Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

The site is within Aquatic Sportfish Management Waters, Elk Severe Winter Range, Mule Deer Severe Winter Range, and Mule Deer Concentration Area. Residences are located approximately 645 feet north, and 1,180 feet south of the wellhead. Riverine wetlands are located approximately 595 feet northwest, 365 feet west, and 355 south of the wellhead. The Animas River is located approximately 450 feet east of the wellhead. Domestic water wells are located approximately 1,280 feet south and 745 feet north of the wellhead. In 2023 an ECMC inspector discovered oil spilling over spill mats and onto concrete. (Doc# 714000177). Additional soil samples will be collected if impacts are found during sampling.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Soil samples will be collected for laboratory analysis of full list Table 915-1 constituents from areas most likely to have been impacted. Visual inspection and field screening of soils will be conducted in the areas described below. One (1) soil sample to be collected on pad from beneath the separator. Sample will be collected with a hand auger at a depth of 1-2 feet below grade surface (bgs) to the estimated bottom of the equipment foundations, pending field identified geologic conditions to identify backfill/native contact. One background soil sample will be collected from an adjacent undisturbed off-pad area or undisturbed on-pad area if off-pad areas are inaccessible. Proposed sample locations are presented on the attached figure 2.
