Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

| Yes | GROUNDWATER | Refer to Tables and Figures | Lab Analysis and Field Screening |
| Yes | SOILS | Refer to Tables and Figures | Lab Analysis and Field Screening |

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the Lucci B 01-23 wellhead cut and cap. Wellhead decommissioning activities and confirmation soil sampling at the Lucci B 01-23 wellhead occurred on August 16, 2024. The wellhead was cut and capped per ECMC rules. The August 16, 2024, wellhead decommissioning sample results were summarized via supplemental Form 27 document number 403923063.

The Field Qualitative Criteria Checklist was utilized during decommissioning activities and no visual and olfactory impacts were observed. Based on laboratory analytical data, a historical release was reported on September 17, 2024, under F19 Document Number 403923513, for elevated naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene for the Eastern wall of the wellhead excavation. Supplemental source mass removal activities occurred on March 21, 2025.

For further information on the flowline assessment, refer to work completed under Remediation Number 30908.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

A grab soil sample was collected at the base of the excavation or the area showing the highest degree of impact during field screening activities at the wellhead excavation. A grab confirmation soil sample was collected at the wellhead excavation, and soil samples were field screened at the N-E-S-W sides of the wellhead. Soil samples were analyzed by a certified laboratory for the full extent of Table 915-1, including but not limited to: TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, and EC, SAR, pH, metals, and boron. Five soil samples were collected on March 21, 2025 from the N-E-S-W sides of the wellhead and were analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was encountered during the site investigation and one grab groundwater sample was collected from the wellhead excavation location on December 10, 2025 and analyzed for all organic compounds and inorganic parameters per ECMC Table 915-1.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative

Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the wellhead area occurred during abandonment activities. Field personnel field screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. The ECMC Wellhead Closure Checklist was utilized and filled out during the abandonment process. A detailed summary of source mass removal and background sampling activities, including field notes, site photos, figures, and laboratory analytical results, are attached to this Form 27.

SITE INVESTIGATION REPORT

SAMPLE SUMMARY

Soil

Number of soil samples collected 5

Number of soil samples exceeding 915-1 1

Was the areal and vertical extent of soil contamination delineated? No

Approximate areal extent (square feet) 100

NA / ND

ND Highest concentration of TPH (mg/kg) _____

-- Highest concentration of SAR 8.61

BTEX > 915-1 No

Vertical Extent > 915-1 (in feet) 0

Groundwater

Number of groundwater samples collected 1

Was extent of groundwater contaminated delineated? No

Depth to groundwater (below ground surface, in feet) 5

Number of groundwater monitoring wells installed 0

Number of groundwater samples exceeding 915-1 1

ND Highest concentration of Benzene (µg/l) _____

ND Highest concentration of Toluene (µg/l) _____

ND Highest concentration of Ethylbenzene (µg/l) _____

ND Highest concentration of Xylene (µg/l) _____

NA Highest concentration of Methane (mg/l) _____

Surface Water

0 Number of surface water samples collected

0 Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

Three background soil samples were collected on March 21, 2025 and three background soil samples were collected on December 10, 2025 and analyzed for Table 915-1 metals in soil and Soil Suitability for Reclamation parameters per ECMC Table 915-1. The background soil samples were collected from a depth of 5.5 feet below ground surface (ft bgs). The lithology between the site and background locations was observed to be well graded sands and clayey sands. The maximum background concentrations for pH and SAR were 8.92 and 38.2, respectively. All pH and SAR concentrations observed were below background levels. The maximum background concentrations with a 1.25x multiplier applied for arsenic was calculated to be 20.5 mg/kg. All arsenic concentrations observed were below maximum and 1.25 x max background levels. As such, arsenic, pH, and SAR should be considered resolved. Additional background samples will be collected to determine site specific background concentrations of lead.

Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) _____

Volume of liquid waste (barrels) _____

Is further site investigation required?

A supplemental site investigation (SSI) will be completed to collect additional background samples to determine if elevated levels of lead are attributed to native soil conditions at the site and to install background groundwater monitoring wells to monitor the elevated levels of chloride in groundwater. The proposed groundwater monitoring well locations are included in the attached Site Map. Groundwater samples will be analyzed by a certified laboratory for analysis of all inorganic parameters per ECMC Table 915-1. The results of the SSI will be submitted on a subsequent Form 27.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

On March 21, 2025, 40 cubic yards of impacted material at the wellhead was removed and hauled to a permitted disposal facility, North Weld Landfill. Confirmation samples collected after excavation were analyzed for the full Table 915-1 suite, and results indicated all organic impacts have been removed. Refer to the Remediation Summary and Operator Comment sections for additional work planned to address remaining inorganic impacts.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Wellhead decommissioning activities and confirmation soil sampling at the Lucci B 01-23 wellhead occurred on August 16, 2024. Two confirmation soil samples were collected and a historic release in Form 19 document number 403923513. The August 16, 2024, wellhead decommissioning sample results were summarized via supplemental Form 27 document number 403923063. Supplemental source mass removal activities occurred on March 21, 2025.

A supplemental site investigation (SSI) will be completed to collect additional background samples to determine if elevated levels of lead are attributed to native soil conditions at the site and to install background groundwater monitoring wells to monitor the elevated levels of chloride in groundwater. The proposed groundwater monitoring well locations are included in the attached Site Map. Groundwater samples will be analyzed by a certified laboratory for analysis of all inorganic parameters per ECMC Table 915-1. The results of the SSI will be submitted on a subsequent Form 27.

Soil Remediation Summary

Groundwater Remediation Summary

_____ Bioremediation (or enhanced bioremediation)

_____ Chemical oxidation

_____ Air sparge / Soil vapor extraction

_____ Natural Attenuation

_____ Other _____

GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

Groundwater was encountered and sampled during site investigation activities. One grab groundwater sample (GW01) was collected at the former wellhead location on December 10, 2025 and was submitted for laboratory analysis of BTEX, TMBs, chloride, sulfate and TDS. Analytical results indicated organic compounds were undetected. The maximum background concentrations with a 1.25x multiplier applied for TDS and sulfate were calculated to be 5676 mg/L and 3275 mg/L, respectively. All TDS and sulfate concentrations observed during groundwater sampling were below 1.25 x max background levels. As such, TDS and sulfate should be considered resolved. Additional background groundwater samples will be collected to determine site specific background concentrations of chloride. An investigation of background inorganics in groundwater will be completed via the proposed 3 monitoring wells.

REMEDIATION PROGRESS UPDATE

PERIODIC REPORTING

Approved Reporting Schedule:

Quarterly Semi-Annually Annually Other

Request Alternative Reporting Schedule:

Semi-Annually Annually Other

Rule 913.e:

After initial approval of a Form 27, the Operator will provide quarterly update reports in a Supplemental Form 27 to document progress of site investigation and remediation, unless an alternative reporting schedule has been requested by the Operator and approved by the Director. The Director may request a more frequent reporting schedule based on site-specific conditions.

Report Type: Groundwater Monitoring Land Treatment Progress Report O&M Report

Other Supplemental Source Mass Removal Summary & Site Investigation Proposal

Adequacy of Operator's General Liability Insurance and Financial Assurance

Describe the adequacy of the Operator's general liability insurance and Financial Assurance to fully address the anticipated costs of Remediation, including the estimated remaining cost for this project (below).

If this information has been provided on a Form 27 within the last 12 months, provide the Document Number of that form.

Noble intends to directly address the costs of remediation at the locations as part of our asset retirement obligation process and operations. Noble has general liability insurance (policies MWZZ316714 and MWZX316724) and financial assurance in compliance with ECMC rules. Records are available on the ECMC's website. The cost for remediation is an estimate only, costs may change upwards or downward based on site-specific information. Noble makes no representation or guarantees as to the accuracy of the estimate.

Operator anticipates the remaining cost for this project to be: \$ 50000

WASTE DISPOSAL INFORMATION

Was E&P waste generated as part of this remediation? Yes

Describe beneficial use, if any, of E&P Waste derived from this remediation project:

No beneficial use.

Volume of E&P Waste (solid) in cubic yards 40

E&P waste (solid) description Hydrocarbon impacted soil

ECMC Disposal Facility ID #, if applicable: _____

Non-ECMC Disposal Facility: North Weld Landfill

Volume of E&P Waste (liquid) in barrels 0

E&P waste (liquid) description _____

ECMC Disposal Facility ID #, if applicable: _____

Non-ECMC Disposal Facility: _____

REMEDIATION COMPLETION REPORT

REMEDIATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? No

If YES:

Compliant with Rule 913.h.(1).

Compliant with Rule 913.h.(2).

Compliant with Rule 913.h.(3).

Do all soils meet Table 915-1 standards? No

Does the previous reply indicate consideration of background concentrations? _____

Does Groundwater meet Table 915-1 standards? No

Is additional groundwater monitoring to be conducted? Yes

Operator shall comply with the ECMC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Reclamation will be in accordance with ECMC 1000 Series Rules.

Is the described reclamation complete? Yes

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

Interim Final

Did the Surface Owner provide the seed mix? _____

If YES, does the seed mix comply with local soil conservation district recommendations? _____

Did the local soil conservation district provide the seed mix? _____

SITE RECLAMATION DATES

Proposed date of commencement of Reclamation. 08/16/2024

Proposed date of completion of Reclamation. 10/31/2027

IMPLEMENTATION SCHEDULE

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

PRIOR DATES

Date of Surface Owner notification/consultation, if required. 09/17/2024

Actual Spill or Release date, or date of discovery. 09/16/2024

SITE INVESTIGATION DATES

Date of Initial Actions described in Site Investigation Plan (start date). 08/16/2024

Proposed site investigation commencement. 04/20/2026

Proposed completion of site investigation. 07/20/2026

REMEDIAL ACTION DATES

Proposed start date of Remediation. 07/20/2026

Proposed date of completion of Remediation. 11/20/2026

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

Change from approved implementation schedule per Rule 913.d.(2).

Basis for change in implementation schedule:

The implementation schedule has been changed due to the decommissioning of the LUCCI B 01-23 wellhead and necessity for supplemental site investigation activities adjacent to the wellhead.

OPERATOR COMMENT

This Form 27 is being submitted to include a 1Q 2026 update for the LUCCI B 01-23 wellhead (REM #36410) and the supplemental source mass removal results and background sampling results at the former wellhead location. A supplemental site investigation (SSI) will be completed to collect additional background samples to determine if elevated levels of lead are attributed to native soil conditions at the site and to install background groundwater monitoring wells to monitor the elevated levels of chloride in groundwater. The results of the SSI will be submitted on a subsequent Form 27.

On March 21, 2025, source mass removal was conducted and 40 cubic yards of impacted material at the wellhead was removed and hauled to a permitted disposal facility. Confirmation samples collected after excavation were analyzed for the full Table 915-1 suite, and results indicated all organic impacts have been removed.

Three background soil samples were collected on March 21, 2025 and three background soil samples were collected on December 10, 2025 and analyzed for Table 915-1 metals in soil and Soil Suitability for Reclamation parameters per ECMC Table 915-1. The background soil samples were collected from a depth of 5.5 feet below ground surface (ft bgs). The maximum background concentrations for pH and SAR were 8.92 and 38.2, respectively. All pH and SAR concentrations observed were below background levels. The maximum background concentrations with a 1.25x multiplier applied for arsenic was calculated to be 20.5 mg/kg. All arsenic concentrations observed were below maximum and 1.25 x max background levels. As such, arsenic, pH, and SAR should be considered resolved. Additional background samples will be collected to determine site specific background concentrations of lead.

Groundwater was encountered and sampled during site investigation activities. One grab groundwater sample (GW01) was collected at the former wellhead location on December 10, 2025 and was submitted for laboratory analysis of BTEX, TMBs, chloride, sulfate and TDS. Analytical results indicated organic compounds were undetected. The maximum background concentrations with a 1.25x multiplier applied for TDS and sulfate were calculated to be 5676 mg/L and 3275 mg/L, respectively. All TDS and sulfate concentrations observed during groundwater sampling were below 1.25 x max background levels. Additional background groundwater samples will be collected to determine site specific background concentrations of chloride. An investigation of background inorganics in groundwater will be completed via the proposed 3 monitoring wells.

For further information on the flowline assessment, refer to work completed under Remediation Number 30908.

In response to the COA associated with SF 27 Doc #404229700 - The Operator was informed by the laboratory that the sample holding times were exceeded for various Table 915-1 constituents. Because not all analytes would be outside of holding times, the lab ran the samples for the full Table 915-1 suite. The full laboratory report (Report) is being transmitted to ECMC for transparency. The Report's case narrative identifies which constituents were run outside of the required holding times. The Report's note column also identifies the impacted constituents. Operator will not be relying on any results associated with a constituent that was outside of the required holding time. TDS analyzed by SM 2450C was analyzed outside of the allotted holding time due to delays at Summit Scientific for the groundwater sample collected during the site investigation event on 3/21/2025. Operator's business partner has resampled the affected location with results included in this Form 27.

Pursuant to Rule 913.e, quarterly reporting will be conducted until closure criteria are achieved for the remediation project. The results of the supplemental site investigation will be submitted on a subsequent Form 27

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
