COLO. OIL & GAS CONS. COMM.

6. Source of Construction Materials. All construction materials for this location site shall be native borrow rock and soil accumulated during the construction. No additional road gravel or pit lining materials are anticipated at this time, but if they are required, appropriate action will be taken to acquire them from private sources after notification is given to the proper regulatory agencies.

7. Methods for Handling Waste Disposal. See enclosed Well Site Layout for the size and location of the reserve pit and the location of the fine mesh wire trash cage. Excess "cut" material will be stockpiled as noted on the Well Site Layout Plat.

During drilling all cuttings, drilling fluids, salts, chemicals and produced fluids will be disposed of in the reserve pit on the location pad. This pit will be approximately 8 feet deep and at least one-half of this depth shall be below the existing ground level. One half of this pit will be used as a fresh water storage during the drilling of the well. The disposal and storage areas shall be separated by a dike.

Any oil or water produced after the well is connected to a pipeline will be collected in a tank on location and trucked to the buyer (to be determined at that time) or to an approved disposal site. No oil or water production is anticipated from this well.

A portable chemical toilet will be provided for human waste during the drilling phase.

Garbage and other waste material will be kept in a covered fenced trash cage and hauled away by truck to an approved disposal site.

Immediately after the drilling rig moves off the location, the remaining trash and flammable material will be collected and hauled off. The reserve pit will be fenced on the open side to protect domestic animals and wildlife. This pit will be utilized during the completion and testing phase of the well for storage of produced fluids. As soon as the testing is completed, the pit will be covered. The drilling pad will then be reclaimed as detailed in item 10.

8. Ancillary Facilities. No airstrips or camps are planned for this well.

9. Well Site Layout. See attached Location Layout Sheet which shows the following items:

(1) Cross section of the pad showing details of the cuts and fills.

(2)
