

**Gunnison Energy**  
**Hotchkiss Federal 12-89 #18-22D**  
**Quarterly Update**  
**01-30-2025**

**Location Details:**

**Operator Name:** Gunnison Energy  
**Operator Number:** 10515  
**Location Name:** Hotchkiss Fed 12-89 #18-22D  
**ECMC Facility ID:** 283919  
**ECMC Location ID:** 324483  
**Lat/Long:** 39.162180, -103.619250  
**Remediation Project #:** 42783  
**Form 27 Initial Doc #:** 404337933

**Summary:**

The Hotchkiss Fed 12-89 #18-22D location is an in-progress plug and abandonment project. Downhole plugging is in progress with surface decommissioning and reclamation to follow. Facility has the injection well, along with injection surface equipment on location.

**2026 Q1 Update:**

Downhole plugging was completed in Q4 of 2025. Cut and cap was delayed until later in the quarter. At the time of the cut and cap, the wellhead was excavated down to 4' and soil samples were taken according to the initial soil sampling plan submitted on the form 27 initial (doc# 404337933). The wellhead excavation area was field screen. No AVO impacts were seen, in situ samples were then taken from the most likely area of contamination. Background samples were also taken at similar lithologic depths for comparison.

Cut and cap work was halted due to additional downhole work possibly needed to be completed. Decommissioning and additional sampling were put on hold until remaining downhole work is completed and surface equipment removed.

Quarterly update includes the submission of the collected samples to date, along with full report and analytics.

Future work and sampling occur in spring once location is accessible after winter conditions.
