

**Gunnison Energy
Allen 12-91 #12-24
Quarterly Update
01-30-2025**

Location Details:

Operator Name: Gunnison Energy
Operator Number: 10515
Location Name: Allen 12-91 #12-24
ECMC Facility ID: 276916
ECMC Location ID: 322002
Remediation Project #: 42833
Form 27 Initial Doc #: 404341668

Summary:

The Allen 12-91 #12-24 location is an in-progress plug and abandonment project. Downhole plugging and associated cut and cap are complete. Surface decommissioning is in progress and associated sampling events occur. Reclamation to follow and required remediation pending any updated soil samples

2026 Q1 Update:

Downhole plugging and associated final cut and cap were completed in Q4 of 2025. During the cut and cap, the wellhead was excavated down to 4' and soil samples were taken according to the initial soil sampling plan submitted on the from 27 initial. The wellhead excavation area was field screen. No AVO impacts were seen, in situ samples were then taken from the most likely area of contamination. Background samples were also taken at similar lithologic depths for comparison.

Decommissioning and additional sampling were put on hold until winter conditions approved to let heavy equipment into location to be able to remove the remaining surface equipment.

Quarterly update includes the submission of the collected samples to date, along with full report and analytics.

Future work and sampling occur in spring once location is accessible after winter conditions.
