General Comment:

Southwest compliance specialist James Blair performed an inspection and audit of the well site on 1/20, 2026. Sediment control and erosion BMPs require maintenance, some dead vegetative debris is within 25 feet of tanks and separators, oxidation on tank is indicative of past overflow, and some stained soil near the pump jack. There is electrical conduit with bare wires near the well head. See individual sections for further descriptions, captioned photo numbers, and CA citations. Captioned photos are included as an attachment.

Please note that any corrective actions from previous audits have not been addressed and remain applicable.
