ECMC Comments

Comment	User	Date
<p>Reclamation Comments: This inspection and previous inspection #718100420 observed that areas of the former pit within the eastern areas of the Location appear to be progressing towards 1003 standards.</p> <p>Inspection #718100420 observed that interim areas were predominantly bare and exposed, with some erosion occurring. A CA was issued to perform additional reclamation at the location. It was observed during this inspection that additional reclamation efforts have occurred; the interim areas appear to have been decompacted and hydroseeded. Some germination is occurring throughout; young perennial bunchgrasses have emerged in some places.</p> <p>Prickly Russian thistle is beginning to establish on the southern, eastern and northern interim areas. This inspection was conducted during the dormant season. Weed management should be conducted during the time of year when treatment efforts are most effective; a follow-up inspection will be conducted during the 2026 growing season to evaluate vegetation establishment and weed control efforts at the location. Ongoing weed management is required throughout interim areas at the location.</p> <p>The Corrective Action from inspection #718100420 has been resolved. Interim reclamation is considered In Process at this time.</p>	gaaschee	01/28/2026
