Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work, if well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Work was performed on the subject well as follows:

Move rig to location. RU. Flange up BOPs. Checked tubing/casing pressure - dead. Picked up 5 jts. of tbg. Tagged PBTD at 1,607' GL. Flanged up cementers. Pumped 100 sx. Class "G" cement. Flushed with 1 bbl water. Pulled tbg up hole to 1,107'. Pumped 100 sx. Class "G" cement. Flushed with 1 bbl. water. Pulled tubing uphole to 607'. Pumped 145 sx. Class "G" cement and had good cement returns to surface. POOH with tbg. Pumped on surface/production casing annulus to 800 psig to verify cement integrity. Held pressure at 800 psig for 10 minutes. Tapped off production casing with 5 additional sacks of Class "G" cement. Washed up equipment and rigged down.

Cut and remove casing strings 3' below permanent ground level. Weld dry hole marker on top of casing.

Reclaim and reseed the location 9/25/91.
