General Comment:

This is a reclamation inspection in regard to complaint #200452258 & #200452256. See attached photos and additional details within this report.

Location

Lease Road:			
	Type	Main	
	comment:	This inspection was performed in response to complainants concern of conditions of the access roads. There are areas of the main road that are below the original topography grade. There are concerns with winter snow drifting onto the road impeding travel. Best Management Practices will need to be considered to maintain the road in a stable condition and to allow all weather access. BMP's may include: timely snow removal practices, snow fencing, regrading, ect. See Rules 603.I. and 1002.	
	Corrective Action:		Date:

Overall Good:

Signs/Marker:			
	Type	WELLHEAD	
	Comment:	Per rule 605.g. Upon form 9 approval, the Operator must update signage within 60 days. New Operator name and emergency contact will need to be installed at each well and tank battery site.

Complaint

Comment: **Complaint ID: 200452256**
 Description: in my cattle pasture, there is a great deal of erosion on the access roads leading to/from oil wells. many of these roads have never been maintained or repaired & it is becoming an issue for not only my cattle, but also the safety of my family & myself. in the event that we receive any bad weather or moisture, my cattle are unable to move from pasture to pasture for grazing and/or water. as calving season is quickly approaching, it is a huge issue as mothers become separated from their babies. if any snow collects in these potential drift areas due to wind, babies may be left behind or lost, or even death. some of these roads are too steep without bad weather that cattle are unable to climb, horse & rider may not see it coming, or drivers are at risk due to hills & blind spots that have been created.

Complaint ID: 200452258
 Description: throughout my pastures, the access roads have eroded to the point where they are becoming a hazard & danger. in the event of any wind, which is mostly daily, a major issue is created for my cattle & myself to utilize this road. this road needs to be returned to grade. issue goes on for miles as the picture doesn't depict clearly.

Corrective Action:

Date:

The subreport 'InspWellFlowline' could not be found at the specified location \\10.14.12

Reclamation - Storm Water - Pit

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment

Comment: There is an area along the main roadside that has eroded and is not stabilized. There are sandy soils that are susceptible to further wind and stormwater erosion. The roadside will need to be repaired and stabilized. This area of the road consists of loose sandy soils and appropriate stabilization BMP's such as roadbase aggregate will be needed. See photos 2,3,4.

Corrective Action: Install or repair required BMPs per Rule 1002.f.(2)
Comply with Rule 1002.e.

Date: 02/20/2026

Pits: NO SURFACE INDICATION OF PIT
